

***Your new Musafia
protects your instrument
with***

Kevlar®

**Musafia Cremona Italy is the world's first violin and viola case maker to
unite the advantages of wood laminate with Kevlar®
anti-intrusion and heat resistance.**

Kevlar® is the preferred material for armored vehicles and military grade bulletproof vests, but is also used for high-performance tires, sails for racing yachts, cables on suspension bridges, wind generators, automotive brake pads, and even Mars rovers.

Why? Because it is ultra light weight, 10 times stronger than steel, and flame resistant up to 800°F. All of this without the disadvantages of Carbon Fiber, which are primarily heat and cold conduction (instead of insulation), shielding of Bluetooth, GPS, and cellphone signals.

Kevlar® is thus the ideal reinforcement for violin and viola cases, **making Musafia cases now stronger and lighter than before.**

***YOUR INSTRUMENT THANKS YOU
FOR CHOOSING A MUSAFIA!***
